

## Midwife Breathsaver 34016 D

Includes shoulder strap

Dimensions: 27"L x 13"W x 11H" ~ 3861 cu in

Used by first responders for years, our Breathsaver is one of the most popular airway management systems in the market for good reason. This bag has multiple ways of efficiently organizing valve masks, airway adjuncts, an oxygen tank, diagnostic tools and much more.

Now available for just midwives this bag can carry all your oxygen supplies from visit to visit. In the full length front and back pouches you will find elastic holders of multiple sizes for multiple tools. Open the main compartment to find tank straps to secure a D or Jumbo D oxygen tank.

On each side of the compartment you will find mesh pouches and on the other side there are 15 elastic holders to hold several different sizes of tools. The inner lid has a full length mesh pouch for you to place any equipment you may need. To help make life a little easier, the padded liner can be removed for easy cleaning.

Carry your midwife Breathsaver with the heavy duty wrap around handles or with the agronomical, adjustable shoulder strap.
